

## Factors of production: Case study

### Assessment Task

#### **Identify the factors of production (Pair activity) (LO1 AS1)**

Read the case study below and answer the question that follows.

Farmer Brown farms with chickens. He employs 15 workers to help him on the farm. They feed the chickens and give them water. Farmer Brown makes use of Thabo's Transport to transport his chickens to the abattoir where they are slaughtered. The abattoir personnel slaughter and clean the chickens before they are sent to the processing plant. At the processing plant, the chickens are washed and cut into pieces. The chickens go through an automated chicken packaging machine, where the pieces are individually quick-frozen before they are packed in plastic bags and sealed in boxes. The boxes of chicken are transported to the supermarkets in a refrigerated truck. The supermarket personnel unpack the chicken bags into freezers and then they are priced. The supermarket employs packers, cashiers and a manager.

Identify all the factors of production in the case study and write them in table format.

<b>Raw materials</b>	<b>Labour</b>	<b>Capital</b>	<b>Entrepreneurship</b>

#### **Peer assessment:**

<b>Criteria</b>	<b>Yes</b>	<b>No</b>
My partner could identify at least three raw materials.		
My partner could identify at least three labour elements.		
My partner could identify at least five capital elements.		
My partner could identify at least two entrepreneurship elements.
